

cFS has been used on 40+ NASA projects historically, about half of them at Goddard

Projects by NASA center (n = 40)

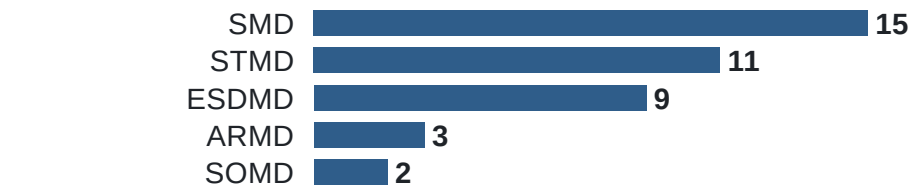

cFS is used at 6 NASA Centers

cFS is across mission directorates and on 40+ projects historically including RST, CCRS, MAV, LRO, Gateway, Artemis, and many more

cFS named by ISwSIS (and approved by HEO directorate) as the standard FSW framework

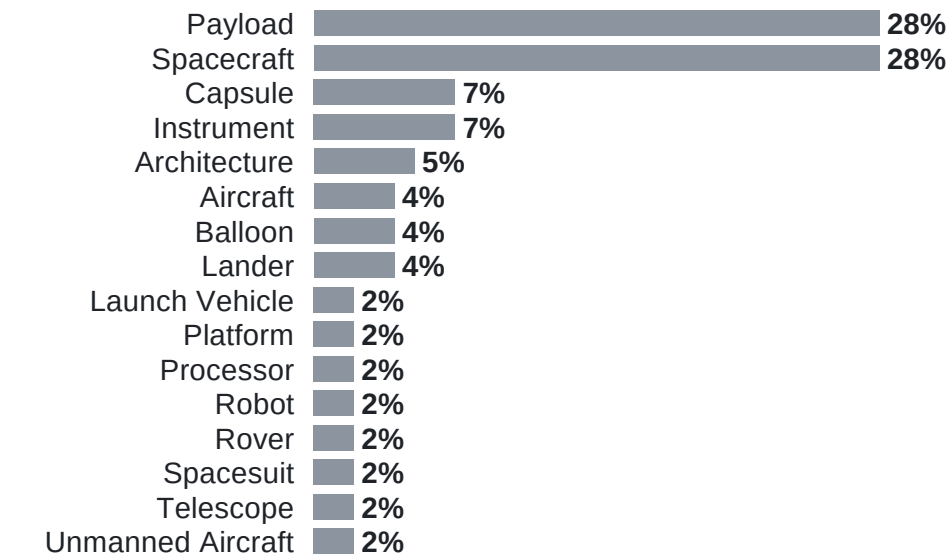

cFS has become the dominant FSW framework at NASA and is likely the most used FSW system in the world

Projects by mission directorate (n = 40)

Share by segment, as printed (labels total 103%)

cFS is on embedded systems that span the space ecosystem

Note: segment shares are as printed and total 103%. No split of 40 projects gives these labels (the smallest total that does is 57), so the source does not say what the segment chart counts.
